PROFESSIONAL SUMMARY

Data Engineer/Data Analyst with 4+ years of experience building scalable data pipelines and cloud-based analytics solutions using SQL, Python, and platforms like GCP, AWS, and Snowflake.

EXPERIENCE

Data Engineer | *Tec Intuition*

February 2025 – Present

- Addressed performance bottlenecks by optimizing datasets in BigQuery and Snowflake using partitioning and clustering, improving query performance by 25%.
- Reduced manual effort and delays by implementing API-based data ingestion pipelines, increasing data refresh frequency.
- Strengthened data accuracy by introducing data validation, monitoring, and logging frameworks across pipelines.
- Improved data reliability by designing end-to-end ETL pipelines and supporting Terraform-based IaC and CI/CD workflows for automated cloud resource provisioning and data pipeline deployment.
- Translated business requirements into scalable SQL and Python transformations, delivering clean, analytics-ready datasets.
- Enhanced system efficiency by optimizing ETL processes, reducing overall processing time by 25%.
- Supported design and maintenance of cloud-based data pipelines across GCP (BigQuery) and Azure environments, enabling scalable analytics and data integration.
- Collaborated with cross-functional teams to deliver data solutions aligned with business goals and enabled faster decision-making through batch and near real-time data ingestion workflows, reducing reporting latency.

Business Analyst | *Advanced Knowledge Tech*

October 2023 – January 2025

- Reduced manual reporting efforts by 40% by designing and automating ETL workflows using SQL and Python.
- Built and maintained data pipelines to integrate and transform operational and financial datasets into a unified reporting layer.
- Enabled faster insights by developing optimized data models and datasets for Power BI dashboards.
- Improved data quality and compliance by implementing validation checks, governance processes, and audit controls.
- Collaborated with stakeholders to translate business needs into data workflows, pipelines, and system integrations.
- Identified and resolved performance issues in reporting datasets, improving scalability and query efficiency.
- Improved data accessibility by organizing and standardizing datasets, enabling consistent reporting across teams.
- Supported ongoing enhancements by documenting data workflows, pipeline logic, and business rules for better maintainability and knowledge transfer.

Junior Data Analyst | *DXC Technology*

January 2020 – May 2022

- Supported high-volume data processing (~100K records/day) by contributing to ETL pipelines and data ingestion workflows.
- Improved data consistency by performing data cleansing, transformation, and validation across multiple sources.
- Assisted in building pipelines for structured and semi-structured data, standardizing reporting inputs.
- Automated manual reporting tasks using Python and SQL, improving efficiency and turnaround time.
- Worked with cross-functional teams to enhance data workflows, documentation, and reporting processes.
- Implemented data pipeline monitoring, logging, and alerting mechanisms, improving reliability and operational visibility of ETL workflows.
- Identified data discrepancies early by performing data profiling and validation checks, reducing downstream reporting errors.
- Assisted in optimizing SQL queries and data extraction processes, improving data retrieval speed and system performance.

EDUCATION

University of Texas at Dallas – *M.S. in Business Analytics & Artificial Intelligence*

Jawaharlal Nehru Technological University, Hyderabad – *B.Tech in Computer Science & Engineering*

SKILLS

- **Business Operations & Support** : KPI reporting, financial analysis, forecasting, process improvement, stakeholder collaboration, product-focused analytics.
- **Analytics & Reporting** : Power BI, Tableau, KPI Dashboards, Excel, Google Analytics
- **Programming & Scripting** : Python, SQL, PySpark, Java, ETL Automation
- **Data Platforms & Cloud** : Google Cloud Platform (BigQuery), Microsoft Azure (data services exposure), Microsoft Fabric (familiar), AWS (S3, Athena), Snowflake, Databricks
- **Databases** : SQL Server, PostgreSQL, MongoDB, Oracle
- **ETL & Data Integration** : ETL Pipelines, Data Transformation, dbt, API/XML Integration
- **Data Modeling & Architecture** : Star/Snowflake Schema, Data Validation, Data Quality, Reconciliation
- **Workflow & Orchestration** : Apache Airflow, Job Scheduling, Pipeline Monitoring, Automated Workflows
- **Infrastructure, DevOps & Systems** : Terraform (IaC), CI/CD pipelines, deployment automation, Git, BRDs, user stories, SAP, CRM systems, PowerApps
- **Platforms & Utilities** : SSMS, JIRA, Git, Postman, ServiceNow, Wireshark, SolarWinds, Nagios
- **Soft Skills** : Communication, teamwork, attention to detail, problem-solving, resilience

CERTIFICATIONS

- Google Project Management | Google Data Analytics | Azure Data Fundamentals
